Understanding Solid Wood

Solid wood is a living natural material. It reacts to environmental influences such as light, temperature, and humidity. Each piece of furniture from CondeHouse is treated with a high-quality care oil that protects and enhances its natural beauty.

Room Climate

A stable indoor climate is essential for the longevity of your solid wood furniture.

- Relative humidity: 40–60 %
- Room temperature: 18–23 °C

Prolonged deviations can lead to shrinkage and swelling. Possible consequences include:

- Warping
- Cracking
- Open glue joints
- Rough surfaces

Pay special attention during the heating season or periods of high humidity. Maintain a balanced indoor climate (e.g., with humidifiers/dehumidifiers).

Daily Care

- Wipe the surface regularly with a soft, slightly damp cloth.
- Do not use microfiber cloths – they can damage the surface.
- Remove stains immediately to prevent them from penetrating the wood.
- Do not use aggressive or abrasive cleaning agents.

Refreshing & Maintenance

Oiled surfaces occasionally require refreshing, depending on usage.

Here's how:

1. Clean the surface with a soft cloth
2. Apply the wood care oil thinly and evenly
3. After a few minutes, wipe off any excess oil with a dry cloth
   Let the surface dry undisturbed for at least 12 hours

Tip: Test the oil on an inconspicuous area first.

Everyday Protection

- Use coasters for hot, cold, or damp items
- Remove standing water immediately
- Avoid direct sunlight, as it may cause discoloration
- Monitor humidity

Minor scratches or pressure marks can be lightly sanded and re-oiled if needed.

Safety Notice

Risk of spontaneous combustion! Always soak oil-soaked cloths in water after use and dispose of them safely.

Care Kit Empty?
